

UK Government Gateway Simulator

The assurance of simulated testing

The UK Government Gateway is a conduit for secure transactions between customers and government including inputs, outputs and payments – and all UK government related, Internet-based applications must integrate with it.

EzGov Europe has developed the applications that more than half of UK Government Gateway transactions originate from. Utilising this depth of experience and expertise, we have created an innovative testing environment for your application before it goes live.

Real world testing

Our Gateway Simulator simulates the UK Government Gateway interface, enabling real world testing scenarios prior to going live. You can test all possible conditions and error flows resulting from interactions with the Gateway, including:

- http access via submission URL
- Govtalk schema validation
- Govtalk Envelope v1 and v2 support
- HM Revenue and Customs Mark support
- Digital Certificates support

Test scenarios are easy to configure in XML files. We include default “happy flow” for ease of use. Alternate flows are triggered by the Gateway Credentials or data in XML body. And our Submission Flow configurator enables rapid setup of new test flows.

Our Gateway Simulator supports the following SOAP Services:

- Authenticate
- Validate
- Refresh Ticketbook
- Enrol
- Register and Enrol

EzGov Europe’s solution makes simulation testing for the UK Government Gateway an easy, low-cost and confident process. You can sleep easily knowing that your application has been fully tested before it goes live.

EzGov Europe is a worldwide leader in innovative online solutions that transform the business of government. A pioneer in developing online government services, we provide the expertise, technology and services to deliver high value, low risk solutions for government.
